

Visionarus

Visionarus Digital Doorman is a software solution for apartment buildings that brings both security and convenience to apartment dwellers. The system allows existing apartment community intercom systems to quickly authenticate and authorize visitors to enter the building, without the need to upgrade existing hardware.

The **Digital Doorman** app works with the apartment building's existing telephone entry system, even if it's not connected to the internet. Available for Android, iOS or the web, the system effectively screens visitors, opens the door to verified guests, and sends a notification to the user's cell phone.

Digital Doorman is the ideal solution for allowing entry to domestic service providers or caregivers. It's an innovation that will also be appreciated by real estate agents and lease or rent short-term lodging businesses.

Visionarus

ENHANCE

Transform your ordinary door buzzer into an intelligent, keyless, handsfree, 24x7 doorman cyber servant!

Stop worrying about answering the front door, exchanging keys or providing front door codes to strangers.
